Motivated and passionate Information Technology undergraduate seeking a Frontend Developer internship. Skilled in **HTML, CSS, JavaScript** and **React** with a solid foundation in programming languages and computer science concepts. Eager to apply my knowledge to real-world projects and grow my frontend development skills.

PROJECTS

EduSphere

Developed a fully responsive university website using React.js, featuring a modern user interface with smooth navigation, reusable components, and dynamic content rendering. Implemented client-side routing, responsive layout design using Flexbox and media queries, and optimized performance for deployment. The project demonstrates strong proficiency in React hooks, component architecture, and cross-device compatibility.

Landing Page

Developed a modern React.js web application, "EV-olution," featuring a dynamic background that seamlessly transitions between a video and a series of images. Implemented state management to control background content and video playback, enhanced user interaction with a navigation bar and interactive hero section, and ensured a modular design using component-specific CSS styling.

Browser Extension

Developed a "Leads Tracker" Chrome extension that offers key features for efficient URL management, including the ability to manually input and save URLs, and automatically capture the URL of the active browser tab. All saved URLs are persistently stored using localStorage, ensuring data availability across sessions. The extension dynamically renders these URLs in its user interface and provides a convenient option to clear all saved links.

BlackJack Game

Developed a web-based Blackjack, featuring core gameplay mechanics such as drawing cards, calculating sums, and determining win/loss conditions. The game includes a user interface for displaying cards, sums, and game messages.

Skills
Languages: **HTML5, CSS3, JavaScript (ES6+), PHP (basic)**
Libraries/Frameworks: **React.js, Tailwind CSS, Bootstrap**
Tools: **Git & GitHub, VS Code, Figma, DevTools**
Concepts: **Responsive Design, Flexbox, API Integration, DOM Manipulation**
Relevant Courses: **Data Structure, Artificial Intelligence, Applied Statistics, Web Development**

Education
KIST college and SS, Kathmandu
Bachelor in Information Technology(B.I.T)| 2021 - Present
